

# (SENIOR) FULLSTACK ENGINEER (F/M/X) BERLIN

MEDICAL  
INFORMATION  
ANALYTICS

MIA

## WE ARE MIA

In the times of a pandemic, it is important for a country to have a strong and efficient healthcare system. In Germany, MIA Medical Information Analytics supports hospitals to remain sustainable and optimize their invoices. MIA is a modern corporate start-up, driven by an international team of professional, enthusiastic people and modern technology. In order to up our game we want to extend both aspects.

## YOU WILL

- work closely together with Engineers, Product Owners, UX, Data Scientists and Medical Professionals
- implement user stories through the whole application stack following modern software engineering practices (automated, clean, incremental, observable, reviewed, secure, tested)
- support connecting and integrating our applications with medical software systems
- continuously improve existing software designs, including domain modeling, architecture and scalability
- drive and support technical discussions and decisions and mentor your colleagues
- on-board new team members

## WE'RE LOOKING FOR

- 3+ years full-time industry experience
- proficiency in Java, Kotlin or Scala and experience with Spring Boot
- proficiency in JavaScript and experience in a modern frontend framework like Vue or React
- strong commitment to quality – experience in test automation, TDD, pair programming, code reviews

## WE'RE OFFERING YOU

- a friendly team with a welcoming, inclusive mindset
- an unlimited contract with competitive salary
- 30 days of holiday per year
- a remote-friendly work setup & a modern office
- trainings for personal and professional growth
- free fresh fruit, beverages and snacks
- fully equipped kitchen and optional lunch menu from our organic catering partner

## INTERESTED?

Please apply with your salary expectations to
